

Frederick's is a long established fine dining restaurant with both a reputation and architecture to protect. Design solutions have been implemented in various areas – carefully and successfully – giving character and refinement a modern day twist:
 The addition of a bespoke and discrete fascia lighting rail – allowing it to shine alongside the meticulously cleaned architecture. The revision of space planning and tasteful re-modelling of customer cloakrooms / WC's.
 The addition of aluminium backed lightweight fabric sails to solve the problem of heat build up and glare from the garden room atrium.
